

CLAIM AMENDMENTS

1. – 10. (Canceled)

11. (Currently Amended) In a T.V. module for use with a remotely controllable associated unit, the T.V. module including a remote-control signal transmitter operative to transmit control signals to the associated unit; a processor for analyzing the operation of the associated unit; and a memory adapted to store remote-control codes, ~~[[the]]~~ a method of determining control codes for the associated unit, comprising the following steps:

transmitting test control codes to the associated unit each time the T.V. module is energized;
analyzing without operator intervention the resulting operation of the associated unit in order to determine its control codes; and
storing the control codes in a memory.

12. (Original) The method of claim 11 wherein the step of electronically analyzing the resulting operation of the associated unit in order to determine its control codes includes the step of analyzing an output signal from the associated unit.

13. (Original) The method of claim 12 wherein the step of analyzing said output signal includes the step of analyzing a video signal.

14. (Original) The method of claim 13 wherein the step of analyzing a video signal includes the step of analyzing the synchronization of said video signal.

15. (Original) The method of claim 14 wherein the step of analyzing said output signal includes the step of analyzing an acoustic signal.

16. - 22. (Canceled)
